

ADVANCED RESEARCH CENTER FOR NANOLITHOGRAPHY

Science with a mission

Meet-Up@ARCNL

Wednesday, May 8, 2019

Event for master's students and graduates in physics and chemistry looking for internships and PhD positions.

The [Advanced Research Center for Nanolithography](#) (ARCNL) focuses on the fundamental physics and chemistry involved in current and future key technologies in nanolithography, primarily for the semiconductor industry. ARCNL is partnered with the semi-conductor equipment manufacturer ASML, and universities UvA and VU. ARCNL is especially interested in the physics of extreme ultraviolet light (EUV) and its use in nanolithography.

During the meet-up you will:

- Get to know ARCNL through presentations and lab tours
- Learn about fundamental research related to EUV lithography
